# WEBINAR TANK CLEANING & WASH WATER ANALYSIS

**Learn how to optimize your cleaning operations and the ease of wash water analysis**

## Introduction

If you are challenged with frequent cargo changes in your tanker fleet now is the time to join one of our webinars on tank cleaning and wash water analysis. During a 2 hours online event (Microsoft Teams) we will take you through the most challenging cargoes and how to clean them most efficiently.

Additionally we will run a live demonstration of our Caretech Spectroscan UV-Vis SmartLog, when used as tool to perform wash water analysis. The aim? The maximum efficiency and performance of your vessels during turnaround.

## Program blocks:

- Theoretical background on today's challenging cargoes
- Practical examples on cleaning optimizations
- Short break
- Theoretical background on wash water analysis with UV-Vis
- Demonstration spectrophotometer for was water analysis

After each block there is room for a Q&A session. Participants can also submit own cargo challenges prior to the webinar, that can be discussed during (at least 3 working days on forehand).

First upcoming webinar: **June 23rd, 10.00 - 12.00 CET / 16.00 - 18.00 UTC SGP**

**EU, America's:** [show your interest by clicking here \(invite per email will follow\)](#)  
**Asia, Middle East:** [show your interest by clicking here \(invite per email will follow\)](#)

## About Marine Care:

Marine Care is a global and leading supplier in tank cleaning chemicals and equipment. Together with our customers we work on continuous improvement of the onboard cleaning procedures, reducing rinse/wash water and slops consumption whilst shortening the cleaning time. We support customers remotely, with our R&D department that is fitted with a unique tank cleaning simulation unit, but can also perform onboard cleaning assistance.

- ✓ Use our vast experience in cleaning
- ✓ Benefit from optimized cleaning protocols
- ✓ Learn about the opportunities around wash water analysis!
